

**General Notice Letter/104(e) for the San Fernando Valley/North Hollywood Superfund Site  
North Hollywood, California**

**ENCLOSURE D: INFORMATION REQUEST**

30. The method used by the Company to remove waste streams from sumps at the Facility is as follows:

**Oil/Water Inceptor Service**

Cleaning of the unit:

1. Remove the flush grate and begin by vacuuming the sediment pan.
2. Remove the sediment pan, and then vacuum the main chamber of the unit empty.
3. Remove the removable bucket and vacuum any sediment.
4. Rinse the sediment pan and removable bucket using the hose in the wash bay allowing the water to flow into the oil/water interceptor main chamber.
5. Vacuum the rinseate from the main chamber until clean.
6. Remove the removable bucket, sediment pan and flush grate.

Unplug the vacuum and remove the vacuum head from the drum.

Properly secure the lid and ring to the drum, then label it as designated by the profile.

Document the waste on the manifest.
